Cases by county in Greece

The table shows total cases broken down by county in Greece, as well as the number of cumulative cases normalized by population in each area. The heat bars represent how things unfold over time in each district: the lighter the bar the fewer the cases at the specific time in the respective area.

| AREA | TOTAL CASES | PER 100K PEOPLE ↓ | WEEKLY CASES PER 100K PEOPLE |
|---|-------------|-------------------|------------------------------|
| Attica | 10,427 | 560 | |
| Imported (Detected at the entry points) | 2,175 | 99 | |
| Thessaloniki | 2,016 | 91 | |
| No Location Provided | 980 | 88 | |
| Pella | 594 | 75 | |
| Kozani | 527 | 63 | |
| Lesbos | 518 | 62 | |
| Larissa | 442 | 33 | |
| Imported (They asked to be tested) | 423 | 11 | |
| Xanthi | 366 | 5 | |

Evolution of cases, deaths and intubated patients in Greece

The chart shows the evolution of cases over time: When the “New daily cases” filter is activated, the number of reported cases per daily is represented for the time period of interest. If the “Cumulative cases per day” filter is selected, the chart will represent the total number of cases until each day of reference within the same time period.
